

Individual Report 3

Calum Jackson (s0812597) - SDP Group 12

February 19, 2011

This report will document the changes made to the robot. Issues involving straight line ability and structure strength were dealt with by reconstructing the robot to locate the wheels at the rear of the robot, and making the structure generally more secure in the process. The kicker motor was repositioned, making the kicker longer, which will allow it to create more momentum to kick the ball.
